Preface

This special edition brings together cutting-edge research results and insights in two areas of materials science: luminescence materials and technologies and materials for fire protection and fire resistance.

The first chapter explores some luminescent materials, which have widespread applications in fields ranging from optoelectronics and energy-efficient lighting to bioimaging and sensing technologies. The articles in this chapter delve into the analysis of luminescence properties, innovative synthesis methods, and the latest advancements in enhancing the efficiency and stability of luminophores. These investigations provide a foundation for developing next-generation materials with high photonic performance.

The second chapter focuses on one of the most pressing challenges in machinery and construction today - enhancing the safety and resistance of buildings, vehicles, and industrial equipment against fire hazards. The articles in this chapter offer a comprehensive look at new fire-retardant materials, coatings, and techniques designed to prevent or delay the spread of fire, thus saving lives and reducing property damage. By addressing both the scientific principles behind these materials and the practical applications of emerging fire protection technologies, this chapter provides a valuable resource for engineers, architects, and safety professionals committed to advancing fire-resistant design and technology.

The special edition presents a detailed examination of two fields in materials science that, while distinct, share a common goal: the development of advanced materials and technologies. This special publication bridges fundamental research and real-world applications, offering insights to researchers and industry professionals.

Table of Contents

Preface

Chapter 1: Luminophores

Synthesis and Luminescent Properties of TiO₂ Materials Single and Triple Doped with Rare Earth Ions (Sm³⁺, Tb³⁺ and Eu³⁺) W.H. Liu, J.R. Zhang, G. Naren and A. Bohnuud	3
Energy Transfer of a New Self-Activating Ba₃TaGa₃Si₂O₁₄: ySm³⁺, xNb⁵⁺ Phosphor Obtained by a Small Substitution of Nb⁵⁺ for Ta⁵⁺ X.L. Zhou, K.X. Wang, Y. Zhang, Z. Wang, S. Rilige, Q.X. Tian, H. Halamuji and K.F. Chao	13
Luminescence Properties of Cs₃Cu₂I₅ Phosphors Powder with Solid State Method Y.L. Zhu, X.C. Song, N.Y. Pan, C.H. Huang, H. Alata, A. Bolag, H. Oimod, J. Ning, B.Q. Zhou and O. Tegus	21
Nonlinear Excitation of Color Centers in a LiF Crystal by Femtosecond Laser Radiation E.F. Martynovich, A.S. Frolova, D. Unurbileg, B. Ulziibayar, O. Bukhtsooj and J. Davaasambuu	27

Chapter 2: Materials and Technologies of Fire Protection and Fire Resistance Providing

Flame Front Model with the Clusters Condensation D. Tregubov, O. Kireev, E. Slepuzhnikov, O. Borsuk and I. Dadashov	39
Thermodynamic Calculations of the Main Characteristics of the Combustion Process of Pyrotechnic Nitrate-Metallized Mixtures with Additives of Organic and Inorganic Substances under External Thermal Influences N. Koziar, O. Kyrychenko, A. Khyzhniak and O. Diadiushenko	49
Assessment of the Influence of Features of Crack Formation in Reinforced Concrete Products on their Fire Resistance A. Vasilchenko, O. Danilin, E. Darmofal and T. Lutsenko	61
Justification of the Efficiency of Application of Plaster for Fire Protection of Concrete Structures Y. Tsapko, O.P. Bondarenko, O. Tsapko and M. Sukhanevych	69
Increasing the Fire Protection Efficiency of Metal Building Structures K. Ostapov, S. Ragimov, Y. Senchykhin and V. Avetisian	79
Method for Detecting Fire Indoors Based on Differences in Sample Averages of an Arbitrary Gas Environment Dangerous Parameter at Adjacent Observation Intervals B. Pospelov, E. Rybka, Y. Mykhailovska, Y. Bezuhla and A. Melnychenko	91
Effect of H₃PO₄ and Phenol Additives on Gel Formation in Silica Fire Retardant Coatings for Building Materials N. Lysak, O. Skorodumova, A. Chernukha and V. Kurepin	103
